

Accuro® Automated Neuraxial
Image Guidance

**Faster, Easier,
Safer Epidurals**

Accuro is Proven to Enhance Patient Safety and Satisfaction.

Accuro is superior to palpation for neuraxial anesthesia, with clinical benefits demonstrated by trainees, novice users, and experienced providers.

- ↑ Improves first-attempt success
- ↑ Improves patient satisfaction
- ↓ Reduces needle insertion time
- ↓ Reduces complications

Performance claims: Singla et al., (2019); D. Ghisi et al., (2019); Ni, X., Li, Mz., Zhou, Sq. et al., (2021); M. Tiouririne, et al.,(2017); B. Carvalho, et al.,(2019); G. Capogna, et al., (2018).

Difficult Anatomy Doesn't Have to Mean a Difficult Epidural.

Leverage automated, real-time image guidance to ensure first-attempt success, especially in challenging patient populations.

- **BoneEnhance®** provides significantly enhanced bone-to-tissue contrast.
- **SpineNav3D™** automates identification of midline, the epidural space or spinous process, and depth.
- **Locator Needle Guide** marks precise needle placement during spinals and epidurals, or supports real-time paramedian approach.

Accuro Is a True Game-Changer!

Improve Efficiency | Reduce Risk | Enhance Patient Care

Accuro is a game changer; I use it in all my procedures and to train our residents. Not only are we improving our first attempt success rates with Accuro, but we are also noticing a reduction in back pain and wet taps. By improving efficiency and reducing risk, we are greatly improving the standard of care we provide to our patients.

Antonio Gonzalez, MD
Assistant Professor of Anesthesiology
Yale School of Medicine

Accuro facilitated the rapid identification of spinal midline and detection of the intervertebral space in a morbidly obese patient. The information provided by Accuro was not obtainable with palpation alone, as evidenced by the two prior failed epidural placements from providers not utilizing image guidance.

Beth Ann Clayton, DNP, MS, CRNA
Associate Professor of Clinical Nursing,
University of Cincinnati
